

Antonio Castillo Hernández

Mexico City, Mexico • antoniocastillo@ciencias.unam.mx • 5543964871

Professional Summary

Computer Science student focused on software engineering and full-stack development. Passionate about Linux and operating systems, backed by a rigorous theoretical background for efficient, scalable algorithmic problem-solving and effective teamwork.

Education

Universidad Nacional Autónoma de México (UNAM) - Facultad de Ciencias Mexico City, Mexico
B.S. in Computer Science | GPA: 9.0 Expected Graduation: 2027

Relevant Coursework: Algorithms, Computer Networks, Software Engineering, Theory of Computation, Operating Systems, Databases, AI & ML, Compilers, Evolutionary Computing, Game Dev, IoT.

Escuela Nacional Preparatoria 7 Ezequiel A. Chávez — UNAM Mexico City, Mexico
High School | GPA: 9.6 April 2022

Projects & Technical Experience

Computer Networks, Cybersecurity & Game Development January 2026 – June 2026

- Developed a 2D RPG in Unity and C#, programming interactive gameplay, custom physics, and global state management.
- Designed network topologies in Packet Tracer and built secure authentication ecosystems using JWT, RSA, and SHA-256.

Compilers, Backend Web Development & Evolutionary Computing August 2025 – December 2025

- Developed a custom programming language and compiler, defining formal grammar, syntax analysis, and semantic evaluation.
- Engineered backend architectures for web applications to ensure efficient data handling and robust server-side communication.
- Programmed evolutionary optimization algorithms to evaluate performance benchmarks on NP-hard complexity classes.

Software Engineering, AI, Operating Systems & IoT January 2025 – June 2025

- Managed the end-to-end Agile development of a Student Yearbook web application, designing responsive UI/UX.
- Trained and deployed a Machine Learning model for automated image and pattern recognition.
- Integrated Memcached at the OS level to optimize database query performance via system caching.
- Programmed ESP32 IoT projects, implementing event-driven logic and hardware signal debouncing.

Databases & Algorithmic Analysis August 2024 – December 2024

- Deployed PostgreSQL relational databases within Docker containers, ensuring data persistence and scalability.

Skills & Interests

Technical: Programming Languages (Java, Python, C/C++, C#, Haskell, HTML/CSS, JavaScript, Bash, SQL, LaTeX). Tools & Frameworks (Linux Arch/Ubuntu, Git, Docker, PostgreSQL, Unity, ESP32, Bootstrap 5, Django, Cisco Packet Tracer, Nmap, Hydra). Core Competencies (Software Engineering, Cryptography, Computer Networks, Infrastructure, Game development and Algorithmic Analysis).

Language: Spanish (Native), English (B2)

Interests: Linux customization (Wayland/Hyprland workflows), game analysis, cybersecurity research, anime, and soccer.
